                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          JOURNAL
                                                            AL Submitted (100 MAY-2003) Human Genome Sequencing Center, Department of Molecular and Human Genetics, Baylor College of Medicine, One Baylor Plaza, Houston, TX 77030, USA
On May 10, 2003 this sequence version replaced gi:25091251.
The sequence in this assembly is a combination of BAC based reads and whole genome shotgun sequencing reads assembled using Atlas (http://www.hgsc.bcm.tmc.edu/projects/rat/). Each contig described in the feature table below represents a scaffold in the Atlas assembly (a 'contig-scaffold'). Within each contig-scaffold, individual sequence contigs are ordered and oriented, and separated by sized gaps filled with Ns to the estimated size. The sequence contigs within a contig-scaffold that consist entirely of whole genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence only contigs will be indicated in the feature
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Submitted (11-OCT-2001) Human Genome Sequencing Center, Department of Molecular and Human Genetics, Baylor College of Medicine, One Baylor Plaza, Houston, TX 77030, USA

(see http://www.hgsc.bcm.tmc.edu/docs/Genbank draft data.)
NOTE: This is a 'working draft' sequence. It currently
consists of 4 contigs. The true order of the pieces
is not known and their order in this sequence record is
arbitrary. Gaps between the contigs are represented as
runs of N, but the exact sizes of the gaps are unknown.
This record will be updated with the finished sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                               as soon as it is available and the accession number will be preserved.

```

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

This invention describes a novel method for inducing apoptosis which comprises overexpressing the CID gene (I). The method is particularly used to treat tumors and can also be used in gene therapy. The method no side effects on normal cells (contrast known methods of inducing apoptosis such as cytotoxins and radiation), and may be effective on

has

Overexpression of (I) is sufficient itself to induce apoptosis but the effect may be increased when used in combination with other anti-tumor methods. When cells transfected with (I) undergo apoptosis, they release factors that kill neighboring, non-transfected cells (bystander effect). This sequence encodes the murine CID protein described in the method of the invention

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The present invention describes a method (M1) for screening for an antineoplastic agent. The method involves exposing cells to a chemical agent to be tested for anti-neoplastic activity, determining a change in comprises a sequence (S) selected from 8447 sequences (given in ABL61664 to ABL70110), or is at least 95% identical to (S), where a change in expression is indicative of anti-neoplastic activity. (I) has cytostatic activity and can be used in gene therapy. M1 can be used for screening an anti-neoplastic agent, and can be used for producing a product which is the data collected with respect to the anti-neoplastic agent as a result of M1, and the data is sufficient to convey the chemical structure and/or properties of the agent. M1 can be used in the treatment of cancer such as colon, breast, stomach, lung, thyroid, oseophageal, ovarian, kidney, prostate or pancreatic cancer, adenocarcinoma, carcinoma, clear cell cancer, infiltrating ductal cancer, infiltrating lobular cancer, squamous cancer and no cancer and many cancer and many cancer and many cancer and many cancer and many cancer and many cancer and many cancer and many cancer and many cancer and many cancer and many cancer and many cancer and many cancer and many cancer and many cancer and many cancer and many cancer and many cancer and many cancer and many cancer and many cancer and many cancer and many cancer and many cancer and many cancer and many cancer and many cancer and many cancer and many cancer and many cancer and many cancer and many cancer and many cancer and many cancer and many cancer and many cancer and many cancer and many cancer and many cancer and many cancer and many cancer and many cancer and many cancer and many cancer and many cancer and many cancer and many cancer and many cancer and many cancer and many cancer and many cancer and many cancer and many cancer and many cancer and many cancer and many cancer and many cancer and many cancer and many cancer and many cancer and many cancer and many cancer and many cancer and many ca

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     813
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     904
```

Detecting granulocyte activation by detecting differential expression of genes associated with granulocyte activation, which serves as diagnostic markers that is useful for monitoring disease states and drug toxicity.

```
CC (GCA), by detecting the level of expression of gene(s) (Gs) identified by (GCA), by detecting the level of expression of gene(s) (Gs) identified by CC expression level to an expression level in an unactivated GC, where conditating (M2) GA by contacting GC with an agent that alters the capable of modulating (M2) GA by contacting GC with an agent that alters the capable of modulating (M2) GA by contacting GC with an agent that alters the capable of modulating (GCA) or an inflammation (especially chronic) in a cCC pathogen or sterile inflammation (especially chronic) in a cCC pathogen or sterile inflammatory disease using the gene expression and expression in a subject, exposure of a subject to a cCC pathogen or sterile inflammatory disease, by detecting the level of expression in a sample of the tissue of gene(s) from Gs, where the level of expression in a subject, exposure of a subject to a ccc expression of the gene is indicative of inflammation; (4) treating CC (M5) an inflammation (especially chronic) or in a tissue, an allergic capable of the tissue of gene(s) from Gs, where the level of expression of the gene is indicative of inflammation; (4) treating CC is useful for detecting GCA; M2 is useful for modulating GA; M3 is useful for screening an agent capable of modulating GCA preferably in an CC is useful for modulating GCA preferably in an inflammation in a tissue; M4 is useful for detecting GA; M3 is useful for pathogen or sterile inflammation in a tissue, an allergic response in a subject, CC pasoure of a subject to a pathogen or sterile inflammation.

CC exposure of a subject to a pathogen or sterile inflammation with an CC is useful for modulating GCA preferably in an GCC expressed in granulocyte to a pathogen or sterile inflammation.

CC exposure of a subject to a pathogen or sterile inflammation; as the pathogen or sterile inflammation, parasitic infection, and infection, parasitic infection, parasitic infection, parasitic infection, but was obtained in effection, conditions. The present sequence

The method comprises determining the expression profile of a group of markers in a patient sample. The method is useful for determining the presence of leukaemia cells, its types or subtypes, and for the preparation of a medicament for treating leukaemia.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              comprises determining the expression profile of a group of markers in patient sample.

The method comprises determining the expression profile of a group of markers in a patient sample. The method is useful for determining the presence of leukaemia cells, its types or subtypes, and for the preparation of a medicament for treating leukaemia.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Determining the subtype of leukemia cells and whether a patient sample contains leukemia cells or other cells, useful for treating leukemia, comprises determining the expression profile of a group of markers in a comprise determining the expression profile of a group of markers in a comprise determining the expression profile of a group of markers in a comprise determining the expression profile of a group of markers in a comprise determining the expression profile of a group of markers in a comprise determining the expression profile of a group of markers in a comprise determining the expression profile of a group of markers in a comprise determining the expression profile of a group of markers in a comprise determining the expression profile of a group of markers in a comprise determining the expression profile of a group of markers in a comprise determining the expression profile of a group of markers in a comprise determining the expression profile of a group of markers in a comprise determining the expression profile of a group of markers in a comprise determining the expression profile of a group of markers in a comprise determining the expression profile of a group of markers in a comprise determining the expression profile of a group of markers in a comprise determining the expression profile of a group of markers in a comprise determining the expression profile of a group of markers in a comprise determining the expression profile of a group of markers in a comprise determining the expression profile of a group of markers in a comprise determining the expression profile of a group of markers in a comprise determining the expression and the comprise determining the expression profile of a group of markers and a comprise determining the expression profile of a group of markers and a comprise determining the expression and a comprise determining the comprise determining the comprise determining the comprise determining the comprise determining the comprise determining the comprise determining the comprise

The method is particularly used to treat tumors and can also be used in gene therapy. The method happitosis such as cytotoxins and radiation), and may be effective on sufficient itself to induce apoptosis but the effect may be increased transfected with (I) undergo apoptosis, they release factors that kill encodes the human C1D protein described in the method of the invention
                                                                                                                                                                                                                                                                                                                                        Sequence 1158 BP; 388 A; 155 C; 237 G; 378 T; 0 U; 0 Other;

The invention relates to screening methods for identifying compounds that bind to nuclear receptor and exhibit cell type specific actions. The invention relates to modulators having an improved therapeutic profile. The method is useful for identifying compounds that bind to a nuclear receptor and exhibit cell type specific actions. It is also useful for
                                                                                                                                 Identifying compounds that bind to nuclear receptor and exhibit cell type specific actions, and useful for treating hyperlipidemia, obesity and

                                                                                                                                                                                                                                                                                                                                                                                                                                                     Ş
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 CC experssion, comprising any of the 27,400 fully defined nucleotide sequences in the specification, or their complements or fragments, and CC encoding at least 8 amino acids of any of the 6888 amino acid sequences fully defined in the specification. The probe is a single exon probe that CC hybridises under high stringency conditions to a nucleic acid molecule CC addressable set of single exon nucleic acid probes cited above, where each of the plurality of single exon nucleic acid probes cited above, where each of the plurality of probes is separately cromesuring human gene expression, a method of measuring human gene expression, a method of grobes cited above, an ORF-encoded peptide comprising the single exon cC contiguous amino acids of any of the above, mentioned amino acid sequences (ptionally with conservative amino acid substitutions), an cc contiguous amino acids of any of the above, mentioned amino acid sequences (ptionally with conservative amino acid substitutions), an customer desiring to measure gene expression, an enthod of probes of selling and/or licensing single exon probes or microarrays to human gene expression data by subscription, and a computer-readable (each record including data on the expression, a method of providing the storage medium which contains a database having a plurality of records cited above. The probes are used an apparatus are useful in gene cypecision analysis. The probes may be used as tools for surveying content and analysis and constructing genome-derived single exon probe called their exon, or in constructing genome-derived single exon probe called acide above. The probes are used in identifying and characterising gross aller genomic alterations, in priming the synthesis of nucleic acids, cordinate and compression of the invention. Note: The present sequence is a human considered by the probase of sequence data for this manner to the propose.

PT USE 밁 Ś 밁 Ś B Ś 밁 Ś 맑 Query Match Best Local ! Matches The invention comprises the amino acid and coding sequences of two mammalian nuclear receptor cofactor proteins (CF7 and CF8). The CF7 and CF8 protein sequences of the invention are useful for screening agents that are capable of inhibiting the cellular function of cofactor CF7 and CF8. The CF7 and CF8 DNA sequences are useful for modulating genes involved in cellular functions, such as: regulation of metabolism and cell homeostasis, cell proliferation and differentiation, pathological cellular aberrations, or cellular defence mechanisms. The present cDNA sequence represents the reverse complement of the mammalian nuclear receptor cofactor CF7 gene sequence Sequence Novel nuclear receptor cofactors, CF7 and CF8 for identifying modulators useful for inhibiting cellular function of cofactor and for treating metabolic disorders, immunological indications and hormonal dysfunctions Claim 1; Fig 2; 68pp; English.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               mammalian nuclear receptor cofactor proteins (CF7 and CF8). The CF7 and CF8 protein sequences of the invention are useful for screening agents that are capable of inhibiting the cellular function of cofactor CF7 and/or CF8. The CF7 and CF8 DNA sequences are useful for modulating genes involved in cellular functions, such as: regulation of metabolism and cell homeostasis, cell proliferation and differentiation, pathological cellular aberrations, or cellular defence mechanisms. The present CDNA sequence encodes the mammalian nuclear receptor cofactor CF7 protein
                                                                                                                                                                                                                                                                                                                                                   gene; nuclear receptor cofactor; CF6; cellular function inhibition; metabolic disorder; immunological indication; hormonal dysfunction;

```
The invention relates to an isolated polynucleotide encoding a nuclear CC receptor cofactor, also known as CFS. The polynucleotide or encoded CC protein is useful for construction of multiple nuclear receptor cofactor specific sequence alignments. The protein is useful for screening agents capable CC polynucleotide is useful for making vectors and for transforming cells, combit of which are ultimately useful for production of the CFS protein. CC They are also useful as scientific research tools for developing nucleic to identify diseased or otherwise abnormal states. They are particularly useful for production of the CFS protein. CC useful for diagnostic purposes to e.g., identify deleted or mutant CFG genes, or their measure expression. They are useful for developing ccl analytical tools such as antisense oligonucleotide for selectively cresponses. The protein is useful for screening drugs for agonist activity, and therefore, for screening drugs for agonist and cregulating physiological responses associated with the cofactors such as neurosystemic disorders, immunological indications, hormonal dysfunction, antibodies for detection of the proteins. The polynucleotide can be used to design primers for a polymerase chain reaction and are also used to crepresents the sense strand of the CFG gene coding region. (Note: this cc from the CFG gene sequence given in Fig 1 (also designated SEQ ID NO: 1)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Matches 361;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Sequence 420
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Claim 1; SEQ ID NO 1; 97pp; English.

ADI
                                The invention relates to an isolated polymucleotide encoding a nuclear CC receptor cofactor, also known as CF6. The polymucleotide or encoded CC protein is useful for construction of multiple nuclear receptor cofactor cf specific sequence alignments, preferably for the construction of protein CC sequence alignments. The protein is useful for screening agents capable of inhibiting the cellular function of the cofactor CF6. The polymucleotide is useful for making vectors and for transforming cells, CC both of which are ultimately useful for production of the CF6 protein. CC They are also useful as scientific research tools for developing nucleic conditions of the cofactor gene, e.g. CC useful for diagnostic purposes to e.g., identify deleted or mutant CF6 genes; or their measure expression levels of the cofactor gene, e.g. CC useful for diagnostic purposes to e.g., identify deleted or mutant CF6 genes; or their measure expression. They are useful for developing completely consist and tools such as antisense oligonucleotide for selectively capables. The protein is useful for screening drugs for agonist and containing physiological responses associated with the cofactors such as antisense oligonucleotide for such as antisense oligonucleotide for developing constituting physiological responses associated with the cofactors such as metabolic disorders, immunological indications, hormonal dysfunction, cc metabolic diseases. The proteins are also useful for developing constitutions and constitution and are also used to design primers for a polymerase chain reaction and are also used to constitute the complement of the CF6 gene sense coding region.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               문
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Ş
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Polynucleotide and polypeptide of novel nuclear receptor cofactor useful for screening drugs regulating cofactor-associated physiological responses e.g. hormonal dysfunctions.

The CF7 and CF8 protein sequences of the invention are useful for screening agents that are capable of inhibiting the cellular function of cofactor CF7 and/or CF8. The CF7 and CF8 DNA sequences are useful for modulating genes involved in cellular functions, such as: regulation of metabolism and cell homeostasis, cell proliferation and differentiation, pathological cellular aberrations, or cellular defence mechanisms. The present cDNA sequence encodes the mammalian nuclear receptor cofactor CF8 protein

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The invention comprises the amino acid and coding sequences of two mammalian nuclear receptor cofactor proteins (CF7 and CF8). The CF7 and CF8 protein sequences of the invention are useful for screening agents and/or CF8. The CF7 and CF8 DNA sequences are useful for modulating tentrol involved in cellular functions, such as: regulation of metabolism and cellular aberrations, or cellular defence mechanisms. The present cDNA sequence represents the reverse complement of the mammalian nuclear receptor cofactor CF8 gene sequence

An ORF has been identified within the sequence. The 5' ESTs were prepared from total human RNAs or polya+ RNAs mainly to the 3' untranslated region (UTR) of the mRNA because they are often obtained from oligo-dT primed cDNA libraries. Such ESTs are not well suited for isolating cDNA sequences derived from the 5' ends of obtained, the full 5' UTR is rarely included. 5' ESTs are derived from RNAs and even in those cases where longer cDNA sequences have been mRNAs with intact 5' ends and can therefore be used to obtain full length cDNAs and genomic DNAs. 5' ESTs are also used in diagnostic, forensic, gene therapy and chromosome mapping procedures. They are used to obtain vectors
